Summary

Full Stack Engineer specializing in scalable Go backends and modern React/Next.js applications. Experienced building production SaaS systems involving RBAC, real-time infrastructure, compliance workflows, and distributed services. Strong focus on backend architecture, developer tooling, and performance-oriented systems design.

Technical Skills

- **Languages:** Go, TypeScript, JavaScript, Python, SQL
- **Frontend:** React, Next.js, Tailwind CSS, TanStack Query, Zustand, Jotai
- **Backend:** Gin, Node.js, NestJS, Express.js, PostgreSQL, Redis, RabbitMQ, WebSockets
- **Infrastructure:** Docker, AWS S3, GitHub Actions, Turborepo, Vercel, Linux
- **Tools & Libraries:** sqlc, pgx, Prisma, Drizzle ORM, Stripe, Cloudinary, Zod

Experience

Full Stack Engineer

Hauldrive

📅 July 2025–Present

📍 Remote

- Designed and built the backend platform in Go using Gin, sqlc, pgx, and PostgreSQL, establishing architecture patterns, migrations, and service boundaries for the v2 rewrite
- Led migration from the legacy Node.js platform to a modern Go + Next.js stack with typed SQL queries and modular service design
- Built multi-tenant RBAC and dual-persona authentication (driver/manager) with JWT auth, organization context switching, and TOTP-based 2FA
- Developed maintenance and compliance systems covering work orders, inspections, MOT, brake tests, and tachograph workflows
- Integrated DVLA and MOT APIs with caching, quota tracking, and fault-tolerant synchronization pipelines
- Implemented Redis caching, RabbitMQ workers, WebSocket notifications, audit logging, and server-side PDF generation in Dockerized environments
- Built operational modules including planner/calendar systems, customer management, and fleet workflow tracking

Independent Developer

Self-directed

📅 Aug 2024–June 2025

📍 Remote

- Built and launched multiple full-stack products and multiplayer systems using Go, Next.js, PostgreSQL, Redis, and Docker
- Developed a real-time multiplayer Monopoly-style game with custom networking and dynamically managed Go game servers
- Built a Discord-based multiplayer game platform with persistent game state and PostgreSQL-backed progression systems
- Designed developer-focused tooling projects including a browser-based compiler platform and a toy programming language targeting WebAssembly
- Explored scalable backend patterns including async workers, WebSocket systems, modular service architecture, and containerized execution

Projects

Chai Programming Language *Go, WebAssembly, React, TypeScript* [Github]

📅 2025

- Built a toy programming language in Go with a compiler targeting WebAssembly
- Developed a browser-based IDE capable of compiling and executing code fully client-side
- Designed modular lexer/parser architecture with extensible compilation backends

Social Connect *Next.js, Express.js, PostgreSQL, Socket.IO, TypeScript* [Github]

📅 2025

- Built a real-time social platform featuring messaging, notifications, mentions, and live activity feeds
- Implemented optimistic UI updates and WebSocket-based real-time synchronization
- Structured as a Turborepo monorepo with strict TypeScript architecture

Code Compiler *Next.js, Docker, Redis, TypeScript* [Github]

📅 2025

- Developed an online code execution platform supporting multiple programming languages with Docker-isolated runtime environments
- Built asynchronous execution pipelines with Redis-backed caching and pluggable language runners
- Added developer-focused editor capabilities including Vim keybindings and real-time execution feedback

Casify *Next.js, Stripe, Prisma, TypeScript* [Github]

📅 2024

- Built an e-commerce platform for custom phone cases with Stripe payment integration
- Implemented media upload pipelines using Cloudinary and order-tracking workflows
- Developed internal admin tooling for analytics, refunds, and order management

Education

Bachelor of Computer Applications (B.C.A.)
LNCT University, Bhopal

📅 2021–2024

📍 Bhopal, Madhya Pradesh, India
